

1 **ABSTRACT**

2 A method includes selecting a video source view from at least one of a
3 plurality of vehicle-mounted video sources based on detection of a vehicle event.
4 The video source view may be displayed according to a presentation mode. The
5 method may include associating a plurality of vehicle events with a video source
6 view or video presentation mode. A system includes display logic selecting a
7 video source view from a plurality of vehicle-mounted video sources based on
8 detection of a vehicle event. The system can include presentation rules specifying
9 an association between a plurality of vehicle events and a video source view and/or
10 a video presentation mode. The presentation rules are editable and configurable.
